

ROUND PILE CROPPERS

„The pilebreakers type 340 and type 380 are highly modular systems that are easy to adjust to each pile diameter at site. The breaking will leave reinforcement intact and guarantees no cracks below the cut off level. The breaking process is many times faster then the conventional breaking and is fully controlled throughout it's operation.

Handling and maintenance of the pilebreakers are very easy and don't require special skills. To adjust the pilebreakers accurately to the pile features, "half-links" are available for both types. Because the "half-links" are without hydraulic cylinders, they can easily be added to or removed from the pilebreaker."

Pilebreaker Type	Pile diameter range	Required number of links for pile diameter									
		400mm	500mm	600mm	700mm	800mm	900mm	1000mm	1250mm	1500mm	1800mm
Type 340	300mm - 1000mm	6	7	8	9	10	11	12			
Type 380	750mm - 1800mm				9	10	11	11	13	15	18
